

1985 Ford Truck
Injector Harness
Installation Instructions

*product may vary from photo.

These Instructions Cover the Following Part Numbers:

FH-185 1985 Ford Truck with 302/351 Engine Injector Harness

Installation Instructions:

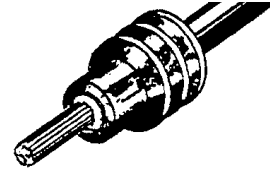

- 1) Disconnect battery
- 2) Begin removing the existing injector harness by disconnecting the harness from the main harness and at the sensors. Note how harness is routed.

- 3) Due to lack of availability of the oxygen sensor connector, it will be necessary to use the enclosed connector, terminal and seal for the wire on your oxygen sensor.

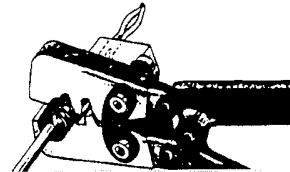

Terminal installation instructions:

-Strip wire roughly 1/4 inch.

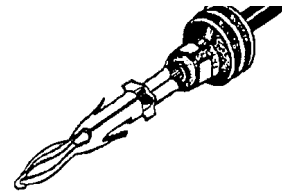

-Install green seal making sure not to fray any wire stands:

-Crimp terminal onto wire, crimping the wire strand area first. Crimp the wire seal second. If you do not have the proper crimp tool, use pliers to fold the flaps onto the wire. The cable seal flaps only need enough crimp to provide friction to keep the seal in place:

-Install completed wires/terminals into connector sockets. Both terminals are compatible with both connector housings. Once all wires/terminals are installed close secondary lock.

- 4) Install replacement harness following factory routing.
- 5) Complete installation by confirming harness is routed away from exhaust and any moving parts.
